Santa Cruz, Laguna, Philippines | [Github](#) | (63+) 907 275 2484 | lhexuspaul@gmail.com

PROFESSIONAL SUMMARY

BS Information Technology student passionate about building end-to-end products, with experience developing modern React frontends, Node.js backends, REST APIs, and production-ready web applications. Curious about AI-powered software and eager to grow into a full-stack developer who understands both user experience and backend systems.

EDUCATION

STI College – Sta. Cruz Branch
BS in Information Technology

August 2023 – Present

PROJECTS

Better Me Web | Full-Stack Developer | betterme-web.vercel.app

Tech Stack: React, Vite, Node.js (Vercel Serverless Functions), Supabase, PayMongo

- Shipped a production-ready digital product storefront that connects React frontend flows to secure serverless checkout APIs, reducing manual order handling through automated payment-to-delivery processing.
- Increased payment reliability by implementing PayMongo checkout sessions plus webhook idempotency controls, eliminating duplicate fulfillment updates from repeated events.
- Strengthened transaction security with signed webhook verification and browser-bound token hashing, ensuring paid download links are exposed only to validated sessions.
- Automated order state transitions in Supabase (pending, paid, fulfilled-ready), improving fulfillment accuracy and post-checkout user experience.
- Optimized purchase completion UX by adding real-time order polling on success pages, allowing customers to access delivery links immediately after payment confirmation.

Latia POS | Full-Stack Developer

Tech Stack: React, Node.js, REST API, SQL Database, Role-Based Access Control

- Designed and built a multi-app POS ecosystem with a dedicated cashier client, centralized backend services, and management dashboard to separate checkout, business logic, and admin operations cleanly.
- Engineered end-to-end sales workflows including cart processing, receipt/transaction recording, inventory deduction, and order history synchronization across cashier and admin interfaces.
- Developed secure backend APIs for product/catalog management, transaction lifecycle handling, user authentication, and role-based authorization for cashier versus admin permissions.
- Implemented admin-side monitoring and control features such as product/price updates, stock management, and sales visibility to support daily operations and faster decision-making.
- Improved reliability of checkout operations by enforcing server-side validation and consistent state updates between frontend clients and backend data stores.

TECHNICAL SKILLS

Languages: JavaScript, PHP, SQL, Java, Python, C#, HTML, CSS

Frameworks & Technologies: React, Node.js, Vite, Bootstrap, Tailwind CSS, Supabase, REST APIs, PayMongo

Tools: Visual Studio Code, Visual Studio, Git, GitHub, Codex, Claude, Vercel
